

AEM TASK-3 (Padmesh G)

News Component Development using Sling Model

1. News Component Development:

The news component was developed using a Sling Model and includes the following fields:

- **News Title** (Rendered as <h2> in green color)
- **News Detail** (Rendered as <p> in yellow color)
- **Published Date** (Displayed in black color)
- **Source**

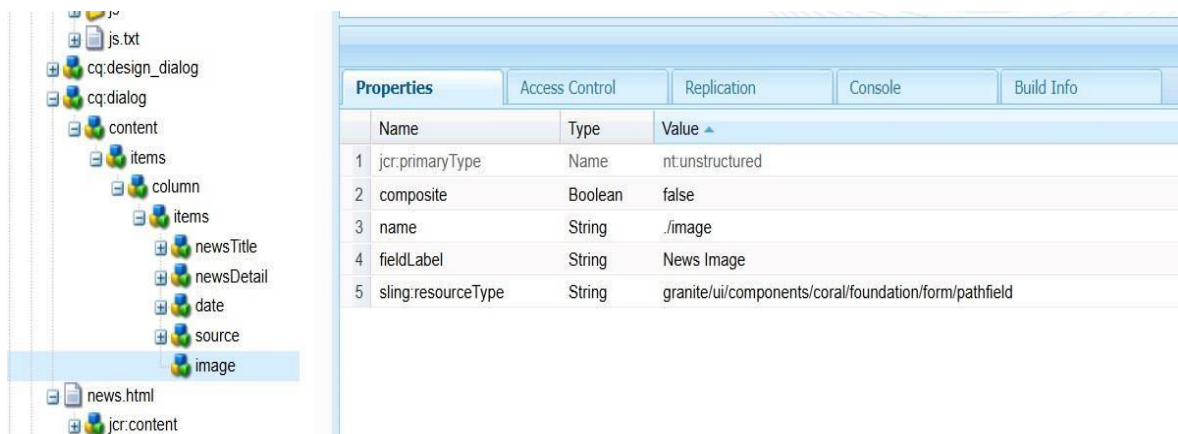

The Sling Model ensures that these fields are dynamically retrieved and displayed in the component.

2. Multi-Field News Component:

A multi-field component was created to accommodate multiple news entries dynamically. This component consists of:

- A repeatable structure allowing multiple news entries
- Fields for News Title and Source

This implementation allows content authors to add multiple news articles within a single instance of the component.

The screenshot displays the AEM development environment. On the left, a project tree shows the structure of the component, including files like `js.txt`, `cq:design_dialog`, `cq:dialog`, `content`, `items`, `column`, `newsTitle`, `newsDetail`, `date`, `source`, `image`, `news.html`, and `jcr:content`. On the right, a properties table is visible, showing the configuration for the component.

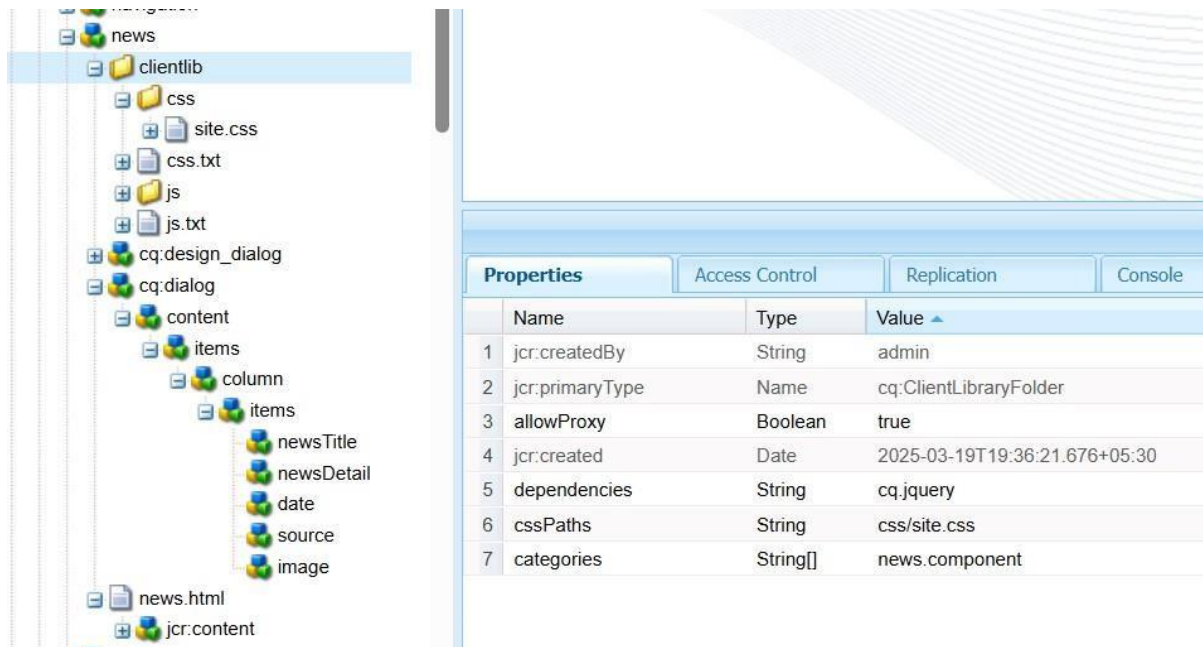

Properties			
	Name	Type	Value
1	jcr:primaryType	Name	nt:unstructured
2	composite	Boolean	false
3	name	String	./image
4	fieldLabel	String	News Image
5	sling:resourceType	String	granite/ui/components/coral/foundation/form/pathfield

3. Clientlibs for News Component :

Clientlibs were implemented for styling the news component. The following styles were applied:

- **Heading (h2):** Green color
- **News Detail (<p>):** Yellow color
- **Published Date:** Black color

The styles were included in the component using AEM's Clientlibs mechanism.

The screenshot displays the AEM console interface. On the left, a tree view shows the project structure: 'news' > 'clientlib' > 'css' > 'site.css'. Below this, other folders like 'js', 'cq:design_dialog', 'cq:dialog', 'content', 'items', 'column', and 'items' are visible, along with files like 'newsTitle', 'newsDetail', 'date', 'source', 'image', 'news.html', and 'jcr:content'. On the right, the 'Properties' tab is active, showing a table of properties for the 'clientlib'.

	Name	Type	Value
1	jcr:createdBy	String	admin
2	jcr:primaryType	Name	cq:ClientLibraryFolder
3	allowProxy	Boolean	true
4	jcr:created	Date	2025-03-19T19:36:21.676+05:30
5	dependencies	String	cq.jquery
6	cssPaths	String	css/site.css
7	categories	String[]	news.component

4. Custom Component Style:

A custom style named cop-news-component was added to the component, allowing content authors to apply predefined styling easily.

5. Base Page Component and Metadata Configuration:

A base page component was created, and a metadata file was linked to ensure that Open Graph (OG) properties are dynamically added to the page. These properties include:

- **og:title**
- **og:description**
- **og:image**

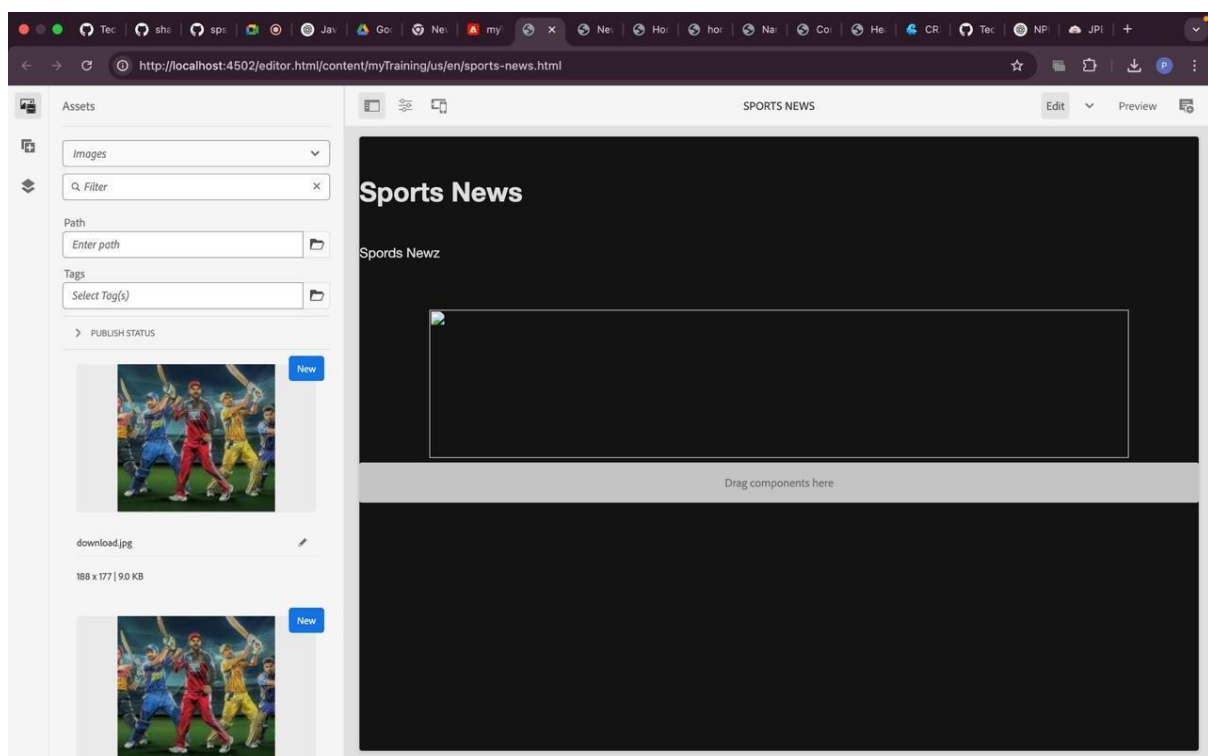

This ensures that when the page is shared on social media platforms, relevant metadata is displayed.

6. Custom Page Properties:

A custom page properties configuration was implemented under "Global Properties" with the following fields:

- **OG Title**
- **OG Description**
- **OG Image Path**

This enables content authors to set Open Graph metadata for each page directly from the AEM page properties.

7. ExtraClientLibs in Multi-Field Component:

The extraClientLibs property was utilized in the multi-field component to ensure additional dependencies and scripts are loaded when the component is rendered. This approach enhances the flexibility and performance of the component.
