# AEM TASK – 4 (Padmesh G)
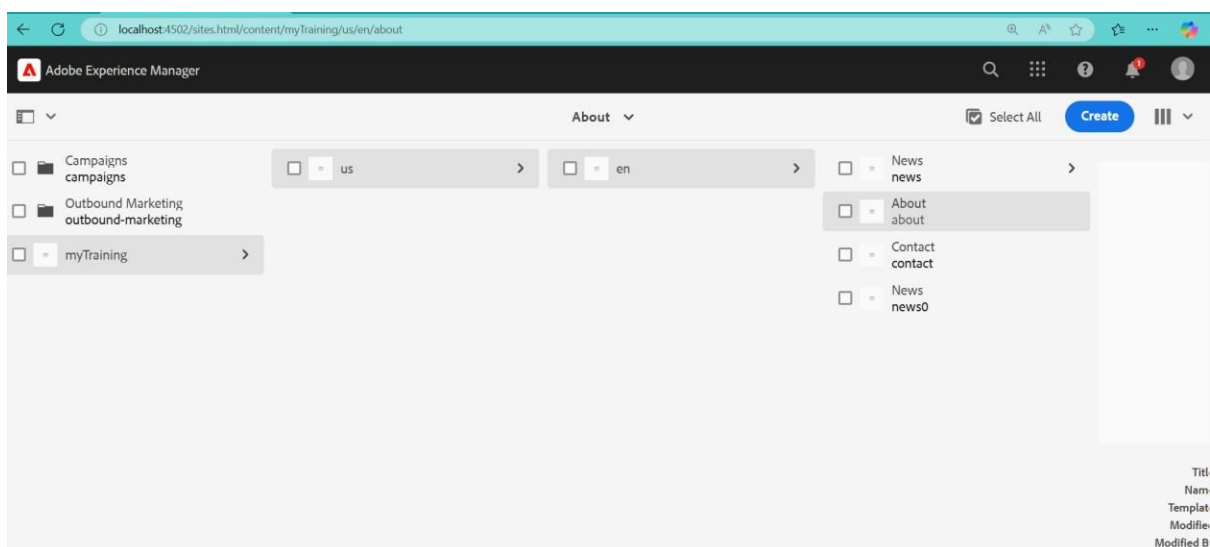

News Page Component Implementation

1. Creating News Page Component:

News Page Component is created using the Base Page Component to maintain a consistency in structure and functionality across different pages.

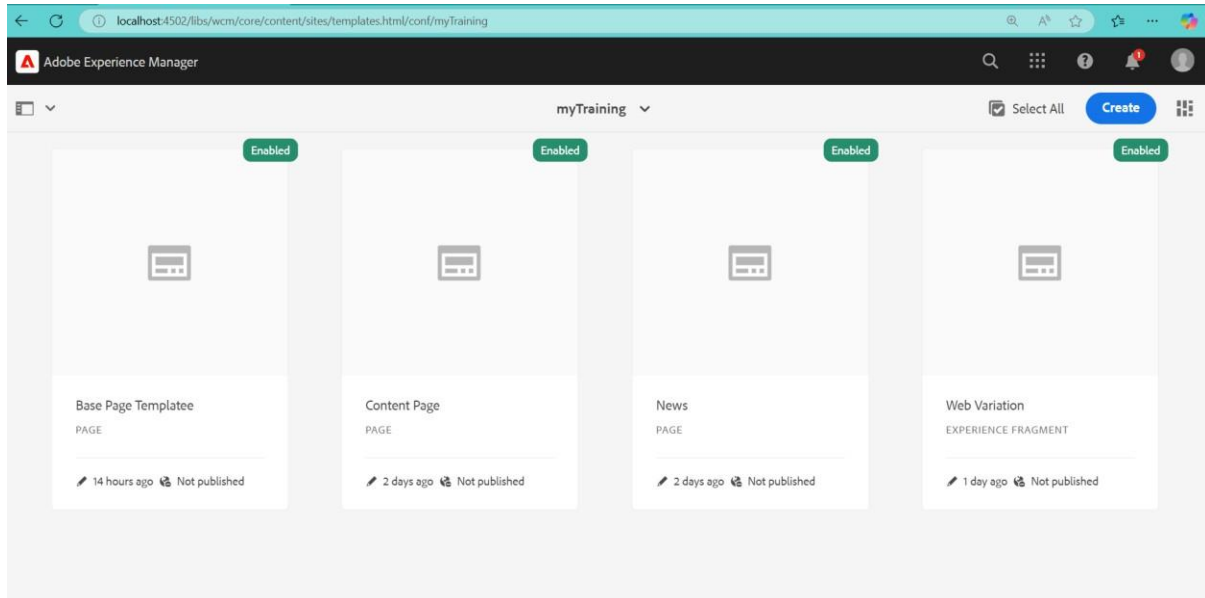

2. Custom Page Property:

A custom page property called About is created. This allows content authors to set a default news image that will be displayed when no specific image is provided for a news article.
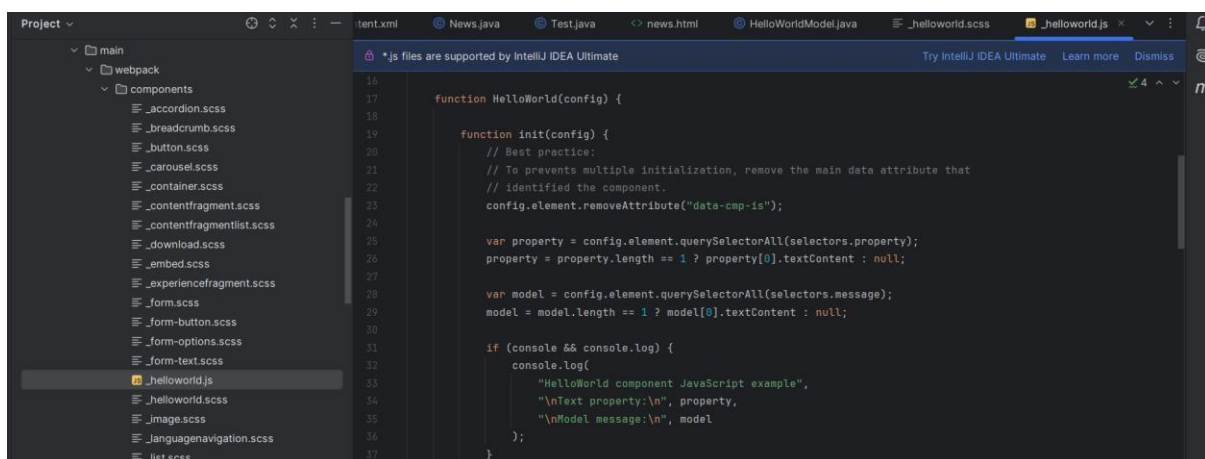

3. Creating News Template Type:

A News Template Type is created using the News Page Component to standardize the layout and behavior of news pages.

4. Applying Styling from ui.frontend Folder:

The styling for the News Component and Hello World Component is applied from the ui.frontend folder to maintain consistency and a professional look.

5. **Custom Style for News Component**:

A custom style is created to allow authors to apply specific styling to the Hello World and News Component, ensuring a consistent visual presentation.
